Professional experience

SENIOR PRODUCT DESIGNER | Grips Intelligence

Mar 2025 - present | Berlin

- Owned end-to-end design process for an enterprise-grade B2B Saas platform, translating multi-source, often ambiguous data architecture into intuitive experiences validated through customer feedback
- Positively impacted business and product metrics, ie. customer retention, by redesigning data-to-insight workflows across the platform's core modules, reducing friction in how users moved from raw data to decisions
- Drove new business opportunities by designing the open app ecosystem
- Improved design-to-production speed by aligning design and development communication and documentation, incl. proposing and maintaining components within our design system
- Shaped design work scope depending on time and dev resources, followed by ongoing design QA to catch gaps between shipped and designed UI
- Designed a concept for an AI agent, allowing users to describe a desired insight in natural language and receive an auto-generated report with the most relevant visualization and data slice

PRODUCT DESIGNER | Grips Intelligence

Apr 2022 - Feb 2025 | Berlin

- Shaped user flows and information architecture for a market research platform, after merging Grips’ two legacy tools (Benchmarking & Product Pulse), evolving the product to support a growing set of features and increasingly complex data
- Partnered directly with engineering to validate feasibility and maintain design cohesion, grounded in a solid understanding of responsive web-based apps constraints, reducing rework between design and build
- Led user research and competitor analysis to inform product decisions, shortening the turnaround from insight to shipped feature

UX/UI DESIGNER | Meistersystems / Found Fair Ventures

Oct 2020 - Mar 2022 | Berlin

- Led design of a construction industry project management dashboard and data tool, as well as technicians’ field work mobile app. Owned flows covering task management, resource planning, invoice and purchasing

UX/UI DESIGN INTERN | Found Fair Ventures

Jun 2020 - Oct 2020 | Berlin

- Created user flows and UI designs for the MVP version of procurement feature
- Established platform’s design system for streamlined design-development workflow

Other experience

DATA RESEARCH CENTER SUPERVISOR | Veeva Systems

Nov 2015 - Jan 2020 | Budapest, Hungary

RESEARCHER | Veeva Systems

Nov 2014 - Oct 2015 | Budapest, Hungary

6+ years of designing user experiences for data-heavy interfaces. I specialize in bringing structure and clarity to complicated systems, grounded in an feedback-early-and-often approach, working closely with cross-functional teams from concept to launch, without stripping away the depth that makes the product valuable.

Skills

- Design systems
- High-fidelity prototyping
- AI-assisted design
- Interaction design
- Qualitative and quantitative user research
- Information architecture
- Knowledge of WCAG guidelines
- Product thinking
- Problem solving

Communicating design decisions and trade-offs clearly

Tools

- Figma
- Lovable
- Notion
- Framer
- Figjam
- Claude

Languages

- English | Fluent/Business
- Polish | Native
- German | B1
- Hungarian | B1

Education

- UX Design
- 2020 | Career Foundry
- Linguistics BA & MA
- 2014 | John Paul II University, PL
